New repository

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository](#).

Required fields are marked with an asterisk (*).

Owner * rag4u09

Repository name * helloPythonworld

Great repository names are short and memorable. Need inspiration? How about [glowing-fortnight](#) ?

Description (optional)

☒ Public
Anyone on the internet can see this repository. You choose who can commit.

☐ Private
You choose who can see and commit to this repository.

Initialize this repository with:

☒ Add a README file
This is where you can write a long description for your project. [Learn more about READMEs](#).

Add .gitignore

.gitignore template: None

Choose which files not to track from a list of templates. [Learn more about ignoring files](#).

Choose a license

License: None

A license tells others what they can and can't do with your code. [Learn more about licenses](#).

☐ You are creating a public repository in your personal account.

Create repository

Step 4: Upload or create a file (doing first time start with upload)
Quick Setup section => Upload an existing file

Invite collaborators

Quick setup — if you've done this kind of thing before

Get started by [creating a new file or uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

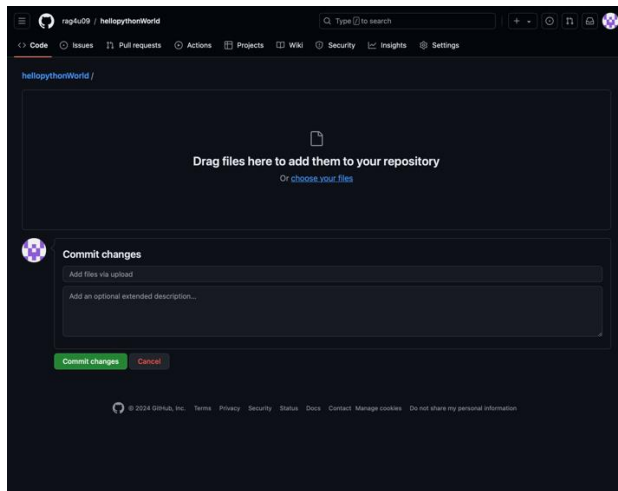

```
echo "# hellopythonWorld" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/rag4u09/hellopythonWorld.git
git push -u origin main
```

...or push an existing repository from the command line

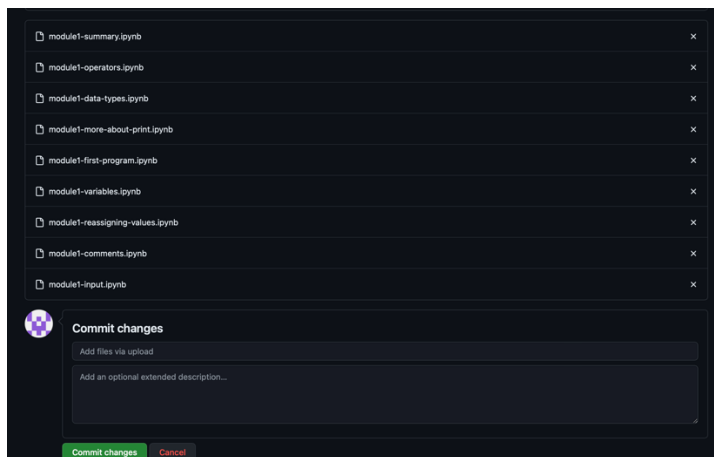

```
git remote add origin https://github.com/rag4u09/hellopythonWorld.git
git branch -M main
git push -u origin main
```

ProTip! Use the URL for this page when adding GitHub as a remote.

Choose your files

Once uploaded -> Click Commit Changes

You are all set !

Open Co lab

File -> Open Notebook -> GitHub

Enter the Repo Name or URL (May ask to validate / login here again)
Once Authenticated you can use the uploaded files.
